EXPERIENCE

Aliforte

Board Member | Product Designer | Business Advisor

September 2023 – Current | Remote | CDMX, México

- I am currently contributing to the development of the company's business plan and operational processes.
- I am in charge of research and strategy to expand the product catalog and points of sale.
- I am in the process of designing and implementing the new branding and marketing strategy.
- I've designed and configured new software that will automate inventory management and other time consuming tasks.
- I am currently overseeing a process to register new products efficiently with the relevant authorities.

Huitzi Solutions

Founder | CEO

October 2020 – January 2023 | Boulder, Colorado

- I founded and established a Salesforce consulting firm with the mission of increasing social mobility for minority populations in the fields of science, technology, engineering, and mathematics.
- I was central to the design, development, and commercialization plan of an accessible and scalable automated education system called ACSES, which is now patented.
- I participated in promotional events such as Denver Startup Week, where I was invited as a panelist for a women entrepreneurs' event.

Stateless

Front End Engineer and UX/UI Designer

July 2017 – April 2020 | Boulder, Colorado

- I designed and developed the minimum viable product (MVP) for Stateless, enabling non-technical users to clearly understand the value of a highly technical networking product. This was key to securing an initial investment of USD 1.5 million.
- I also designed and built the first version of Stateless's web interface, which required creating user-friendly component designs that simplified complex networking functions and operations. This was instrumental in securing a USD 11.5 million Series A investment.
- I contributed to the UX/UI design, technical architecture, and development of a web components library built with Vue.js, Node.js, Express, Ionic, and ZooKeeper.
- I led the implementation of conflict-resolution processes based on the Dignity Model developed by Donna Hicks, PhD. These processes helped reduce internal conflict, increase employee diversity, and improve workplace culture.
